15 NOV 1978

MEMORANDUM FOR: Acting Deputy Director for Administration

ATTENTION: [redacted]

FROM: [redacted]
Acting Director of Logistics

SUBJECT: Records About Drug Experimentation

REFERENCES:
a. Memo dtd 3 Oct 78 fm DDA to D/L, same subj ([redacted])
b. Memo dtd 16 Oct 78 fm EO/OL to DDA, same subj ([redacted])
c. Memo dtd 3 Nov 78 fm EO/OL to DDA, same subj [redacted]

1. The Office of Logistics has now completed its in-depth review of records, both current and in archives, in an effort to surface any information not heretofore reported on drug-related experiments.

2. Information in some files in archives belonging to the [redacted] of the Procurement Division revealed that [redacted], acting on behalf of the then Technical Services Division (TSD) of the Deputy Directorate of Plans (now Office of Technical Service, Deputy Directorate for Science & Technology, OTS/DDS&T), provided the funding mechanisms whereby grants were made to various institutions for the purpose of conducting drug-related research and experiments. Copies of the pertinent information found in these files are forwarded herewith. With the exception of a few names, presumed to have been excised when these documents were initially forwarded from the proprietaries, these papers are complete and therefore are considered sensitive. If there are any questions relating to these documents or if they are to receive further distribution and therefore require sterilization, please contact [redacted] on extension [redacted] for assistance.

Unclassified when removed from att.

Approved for Release
Date JAN 2000

SUBJECT: Records About Drug Experimentation

3. The Chief of the [redacted] Staff during the period 1954 to 1966 was asked to review these files and advise if, to the best of his recollection, he knew of any other such Agency associations pertaining to drug-related matters or of any particularly sensitive activities heretofore not surfaced in pertinent investigations. He did not.

4. Because the [redacted] documents were uncovered during the course of a complete file-by-file review of the entirety of the OL archival records and because - based on those documents uncovered - OL has again reviewed all probable sources of drug-related documentation, it is believed that the probability of any drug-related documents remaining undiscovered in OL filing systems is so slight as not to merit further search.
